

CLUTCH CATALOGUE

PASSENGER & LCV APPLICATIONS CATALOGUE

Choose the reliability of the Conversion Kit "Valeo KIT4P" to replace the dual-mass flywheel

Composed of a solid flywheel and a reinforced long travel damper clutch disc the conversion kit "Valeo KIT4P" is a reliable and efficient alternative to the traditional dual-mass flywheel + kit.

AFTER FITTING A "VALEO KIT4P", YOU WILL NEVER NEED TO CHANGE YOUR FLYWHEEL, ONLY THE CLUTCH KIT.

*Applies only to the solid flywheel component of the conversion kit "Valeo KIT4P" and according to the 2017 Valeo Service Africa & Overseas General Terms and Conditions. Disc, cover and/or bearing, are excluded from this guarantee.

Major car manufacturers and millions of drivers are already experiencing this technology

> RELIABLE:
optimal protection of the engine and gearbox.

> EASY TO FIT:
same mounting time as a dual-mass flywheel and no specific adjustment required for the clutch.

> COMFORTABLE:
high filtration of vibration and noise to enhance driving pleasure.

F

Kits marked with this F are 4 in 1 Technology

Valeo, Flywheel Specialists

DUAL MASS FLYWHEEL SOLUTION

To maintain the same OE technology
Benefit from 90 years expertise in OE.
• Comfort
• Easy to identify

KIT4P SOLUTION

For intensive usage
Alternative to the dual mass flywheel with its solid flywheel and a reinforced long travel damper clutch disc.
• Reliable
• Easy to fit
• Economical

*Applies only to the solid flywheel component of the conversion kit "Valeo KIT4P" and according to the 2016 Valeo Service Africa & Overseas General Terms and Conditions. Disc, cover and/or bearing, are excluded from this guarantee.

CSC COMPARATIVE GUIDE

[illegible]

TROUBLE SHOOTER

■ SHUDDER

■ NOISE

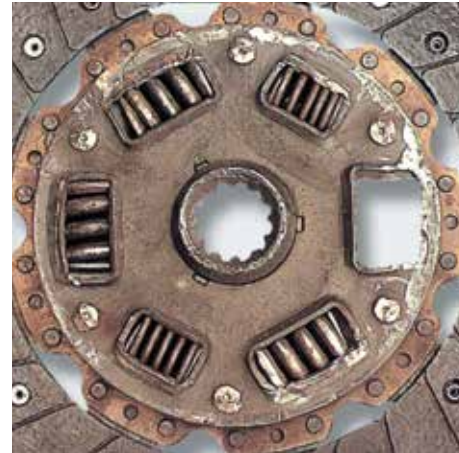

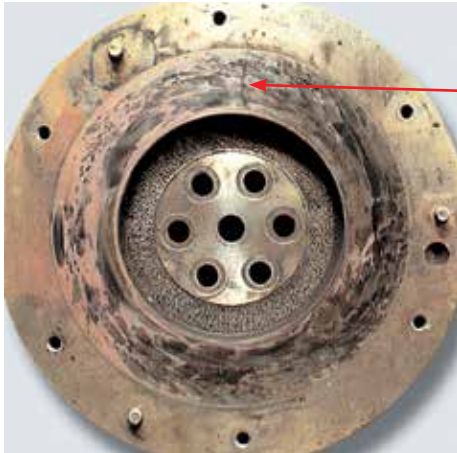

■ SLIP

■ DRAG

■ NO DRIVE

■ ■ ■ Flywheel - cracked, burnt, worn out.

■ ■ ■ Broken torsion spring.

- 1] **Cracked flywheel.**
Cracks in a flywheel are caused by excessive overheating due to slipping.
- 2] **Burnt flywheel.**
Burn marks on a flywheel are caused by a slipping clutch, a driver resting their foot on the clutch pedal or grease/oil contamination.
- 3] **Worn out flywheel.**
The flywheel is worn due to standard operation.
Note: Always machine the flywheel.

The torsion spring can be broken and still lodged in the window, or it could have broken out completely.

- 1] Misalignment of engine to gearbox.
- 2] The gearbox was hung during installation.
- 3] Heavy towing.
- 4] Driving at low engine rev's in a high gear.
- 5] Down changing to slow the vehicle.
- 6] Push starting or tow starting the vehicle.
- 7] Aggressive driving, racing pull aways from a standstill.
- 8] Worn flywheel spigot shaft bearing or bush.
- 9] Worn gearbox first bearing.
- 10] Worn drive train components, CV joints, U joints or differential.

■ ■ ■ Worn Clutch Facing.

■ ■ ■ Damaged Clutch Facing.

- 1] Normal wear of the clutch.
- 2] The flywheel was not machined during the installation.
- 3] Incorrectly set release mechanism.
- 4] Resting ones foot on the clutch pedal.
- 5] Sticky release mechanism.
- 6] Clutch plate sticking or dragging on spigot shaft.

- 1] Excessive slippage caused by incorrect adjustment.
- 2] The clutch plate was dropped on its edge prior to being fitted.
- 3] The driver has rested his foot on the clutch pedal.
- 4] Overrev (bursts speed).
- 5] Incorrectly machined flywheel.

TROUBLE SHOOTER

SHUDDER

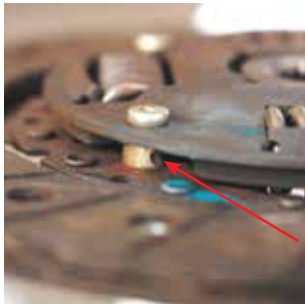

NOISE

SLIP

DRAW

NO DRIVE

Damaged Stop Pins.

- 1] Aggressive driving, hard pull away from a stand still.
- 2] Down changing to slow the vehicle using the engine as a brake.
- 3] Misalignment of engine to gearbox.
- 4] Worn flywheel spigot shaft bearing or bush.
- 5] Worn first bearing in the gearbox.
- 6] Worn drive train components, U Joints, Differential and CV Joints.
- 7] Overloading of vehicle.

Oil or Grease Contamination.

- 1] The clutch plate was handled with oily or greasy hands.
- 2] The flywheel and pressure plate were not wiped clean prior to being installed.
- 3] The rear engine oil seal or first gearbox seals is leaking.
- 4] The bearing guide sleeve or the fork have been over greased.
- 5] The splines have been over greased.

Burst Facing.

- 1] Changing from a high gear to a low gear, whilst travelling at a high speed.
- 2] Excessive slipping of the clutch.
- 3] Oil contamination of the clutch facing.
- 4] Free wheeling downhill, then selecting a low gear.
- 5] Overrev (burst speed).

Broken Cushion Plates.

- 1] Hung gearbox.
- 2] Engine to gear box misalignment
- 3] Worn flywheel spigot shaft bearing or bush.
- 4] Tow starting or push starting the vehicle.
- 5] Driving at a low speed in a high gear.
- 6] Clutch plate fitted backwards.

Broken or Cracked Clutch Plate.

- 1] Engine to gearbox misalignment.
- 2] Worn flywheel spigot shaft bearing or bush.
- 3] Worn first bearing in the gearbox.
- 4] Hung gearbox.

Damaged Splines.

- 1] Splines have been damaged during installation of the gearbox.
- 2] The gear box splines are worn, the shaft should be replaced.
- 3] Worn flywheel spigot shaft bearing or bush.
- 4] Worn front gearbox bearing.

TROUBLE SHOOTER

SHUDDER

NOISE

SLIP

DRAG

NO DRIVE

Excessively worn diaphragm.

- 1] Incorrectly set free play.
- 2] Driver resting their foot on the clutch pedal.
- 3] Prolonged use of clutch pedal during gear changes, (riding the clutch pedal).
- 4] Worn fork.
- 5] Worn release bearing sleeve.
- 6] Worn or corroded slave cylinder, piston not returning to allow free play.
- 7] Stretched, sticky or frayed cable.

Broken Face Plate.

- 1] Incorrectly set free play.
- 2] Driver resting their foot on the clutch pedal.
- 3] Oil contaminated clutch plate facing.
- 4] Faulty release mechanism.
- 5] Prolonged use of clutch pedal during gear changes, (riding the clutch pedal).

Burn and Slip Marks.

- 1] Incorrectly set free play.
- 2] Driver resting their foot on the clutch pedal.
- 3] Prolonged use of clutch pedal during gear changes, (riding the clutch pedal).
- 4] Worn fork.
- 5] Worn release bearing sleeve.
- 6] Worn or corroded slave cylinder, piston not returning to allow free play.
- 7] Stretched, sticky or frayed cable.

Unevely Worn Diaphragm.

The release bearing has worn unevenly on the diaphragm fingers.

- 1] The engine and gearbox are not truly aligned.
- 2] The bearing guide sleeve is worn.
- 3] The fork is worn.
- 4] Incorrectly adjusted release mechanism.
- 5] Driver resting their foot on the clutch pedal.

Circular Grooves.

- 1] Clutch plate facings worn due to normal wear and tear.
- 2] The clutch facings have burst see above.

Burn Marks on the Face Plate.

- 1] Oil or grease contamination, silver dots.

TROUBLE SHOOTER

SHUDDER

NOISE

SLIP

DRAG

NO DRIVE

Bent or Broken Drive Straps.

- 1] The pressure plate was dropped during or before installation.
- 2] Tow starting the vehicle in too low a gear.
- 3] Excessive wear in the drive line.
- 4] Incorrect gear selection, a low gear at high speed.
- 5] Letting the clutch pedal out to fast at high rev's in reverse.

Bent Cover.

- 1] The dowels in the flywheel where not located in the dowel holes in the pressure plate.
- 2] Pressure plate dropped before fitting.
- 3] Incorrect location of installation clips (opel).
- 4] Flywheel dowel pins bent or damaged.

Worn Release Bearing.

- 1] The release bearing has been fitted backwards on the collar.

Off Center Contact.

- 1] The fork is worn.
- 2] The release bearing guide sleeve is worn.
- 3] The release bearing has been incorrectly installed.

Melted or Broken Release Bearing.

- 1] The release mechanism is in a poor condition and needs repairing.
- 2] The adjustment was not set correctly.
- 3] The driver rests their foot on the clutch pedal.

Excessive Grease.

- Excessive grease can find its way on to the clutch facings.
- 1] The point of contact between the fork and release bearing has been excessively greased.
 - 2] There is too much grease in the grease groove of the bearing.

NOTES

This image shows a single sheet of white paper with horizontal ruling lines. The lines are evenly spaced and run across the width of the page. There are no margins, text, or other markings on the paper.

NOTES

This image shows a single sheet of white paper with horizontal ruling lines. The lines are evenly spaced and run across the width of the page. There are no margins, text, or other markings on the paper.

WARNING!!!

**Do not manually depress the CSC.
This action will cause damage
to the seals.**

**Incorrect handling will cancel the
warranty, of both the CSC and the
Clutch kit.**

General Fitting Procedure for Concentric Slave Cylinders (CSC)

The fitment of a Concentric Slave Cylinder CSC must be carried out in a clean area. Clean the inside and outside of the bell housing / gearbox. Also clean the pipe work and couplings to the CSC. Make sure that everything that has been cleaned is then dried off and no cleaning fluid or solvents is left behind.

Check that the couplings of the new and old CSC are the same.

There are CSC's which are the same shape and size but the coupling varies in diameter.

Closely inspect the gearbox input sleeve; it must be clean and smooth. There must be no burrs or any other damage to the input sleeve.

Check that the clutch plate is installed the correct way around. Some clutch plates have longer bosses on the engine side. If this type of clutch plate is installed incorrectly and the longer boss is on the gear box side it could foul against the CSC.

This will damage the CSC and the warranty will be void.

Install the CSC to the gearbox.

Do not remove any plugs that may be blanking off the connections before the CSC is installed.

Make sure that the CSC is installed flat against the mounting surface. Any face seal or rubber sealant that is used should be in accordance with the vehicle manufacture's specification. If the CSC is not seated correctly the back face plate can push out, this will cause a failure.

NOTE:

That some CSC's have an input sleeve seal built in.

This seal must be lubricated. Failure to lubricate the seal will result in damage and the seal will leak.

Flush the hydraulic system including the master cylinder and connecting piping.

This is to ensure that there is no contamination in the system that can damage the CSC.

Connect the piping to the CSC and refill the system with the correct specification hydraulic fluid.

Do not use a "Brake bleeding device" or "Power assisted bleeding device".

Bleeding of the CSC system cannot be carried out by using a brake bleeding device as it will cause the system to over pressurize, this will result in damage to the system and seals. This will void the warranty. The CSC must then be replaced once it has been over pressurized.

Do not pump the clutch pedal. Repeated pumping of the clutch during the bleeding process can cause the CSC to over stroke.

Depress the clutch pedal wait a short period for the system to stabilize. Open the bleeding screw or nipple and release any air.

Close the bleeding screw, release the clutch pedal. This process must be repeated until the air is out of the system.

This will take +/- 20 repeats to fully bleed the system. Remember to top up the hydraulic fluid in the reservoir.

KITS SPECIFICALLY DESIGNED FOR THE OFF ROAD ENTHUSIASTS

EXEDY Safari Tuff Clutch

Using its extensive original equipment experience EXEDY has developed Safari Tuff as the ultimate clutch for off-road use.

Safari Tuff was specifically engineered for handling tough 4WD conditions. It's built with an upgraded damper to handle substantial increases in torque and improve drivetrain dynamics whilst experiencing tough off-road or towing conditions.

High quality premium friction materials are used to improve fade resistance, burst strength, heat dissipation and provide the durability required for serious 4WD conditions.

The Safari Tuff range has been designed by EXEDY in one of the world's most comprehensive facilities and extensively tested in some of the toughest four wheel drive races in the world by champions in the Australian Safari, Malaysian Rainforest Challenge and the Xtreme Winch Challenge. EXEDY Safari Tuff clutch range, for serious four wheel driving.

EXEDY is the world leading manufacturer of drivetrain components and is committed to providing superior products, technology and customer service to the market. EXEDY is the largest original equipment clutch manufacturer for Japanese vehicles which means only high quality components are used, guaranteeing correct fit and function.

FEATURES:

- Higher clamp loads increase than standard clutch
- Anodized to maximise corrosion resistance
- Spheroidal Graphite anti burst casting
- Additional drive straps (as required)
- Upgraded damper springs
- Premium high grade friction material

RESULT:

- Comfortable pedal feel
- High burst strength
- Improved durability
- Easy identification against imitations
- Increased torque capacity
- Improved drive train dynamics
- Improved endurance and durability

Available for many Japanese 4x4 vehicle applications.
